

Integrating Robotics into the High School Curriculum

by Katie Guise

The presentation will cover the benefits of integrating robotics into high school curriculum, focusing on the different levels of FIRST and VEX robotics. Utilized software information will be provided, as well as introductory information on how to start and find teams.

Biography: Katie Guise is a freshman at the University of Central Florida. She is currently studying biology and biomedical sciences, and involved in various research efforts by the University. She spent 6 years involved with robotics teams before college, and is currently a mentor to a high school FTC team.
